Dear friends,

Chuck BELLAMY had an excellent idea. He stimulated me to add a list with the new taxa, described in the cited publications. Not everybody of us has the possibility to go to the next library to get the entomological journals where he can find the newly described taxa or changes in nomenclature.

To be sure of the recent level in nomenclature one should wait for the next issue of the Zoological record or ask some colleagues. This is very time consuming too and does not lead to a good end automatically.

So I will provide you with this service as far as I receive your papers. As I listed the publications without numbering them specifically (2001a, 2001b and so on), I am adding in those cases where there can be a possibility of misunderstanding, the abbreviation of the journal where the paper was published. Otherwise I will write only the name of the author and the year and page of the reference.

Let me add a short note on the paper of ZYKOV (1999). In 1996 the ICZN published Opinion 1825 (Bulletin on Zoological Nomenclature 53(1):57-59), conserving *Scintillatrix* with the type species *rutilans* and *Palmar* with the type species *festiva*. Nobody seemed to take care of this decision. Descriptions and revisions were published using *Scintillatrix* and *Palmar* as well as *Ovalisa* in various combinations. ZYKOV (1990, The usage male genitalia structures of subgenus *Scintillatrix* of genus *Palmar* (Col., Bup.) for clearing up some questions of subgenus phylogeny.- Materials of the X Congress VEO. Success of entomology in the USSR. Coleoptera insects. Leningrad:46-48) tried to finish this game. BÍLÝ (1999. Folia Heyrovskyana 7:87-90) writes that the nomenclatural confusion around *Lampra*, *Palmar*, etc. was more or less solved by him and ZYKOV, but nevertheless our colleagues are not willing to respect neither results of scientific work nor any other decision. Unfortunately the papers of ZYKOV are hardly anywhere available. This may be a reason of continuous confusion. On the other hand I do have severe problems to understand ZYKOV in the use of *Palmar* instead of *Scintillatrix*. If the use is only a matter of the date of publication, why then is a new generic name accompanied by a description. SCHAEFER (1949) clearly excluded *Palmar* from *Lampra* by using characters, giving his new genus a narrower limit than the former one had. There is no logic in the use of a name with a restricted sense for species not fitting to the characters as given in the original description! Then we are describing — at least genera — in vain. Each description includes a separation from other terms. And a term lives of and with its description! So we should not give a simple date (year) a higher value than the meaning of the word!
